

Sustainability policy

Working together on a circular future

Our vision

At Finipur, we believe that sustainability and innovation go hand in hand. As a trendsetter in textile finishing and the application of technical coatings, we strive to provide our customers with not only more beautiful, better and stronger products, but also products that contribute to a circular economy and a healthier planet.

Our commitments

1. Circular coating solutions

We develop and produce coatings that make recycling possible. With our water-based polyolefin dispersions, we create mono-material constructions that are 100% recyclable and therefore without expensive separation steps and without loss of quality. We use it to prepare artificial grass, carpet, upholstery fabrics and automotive interiors for the future.

2. Zero discharge

Since applying for our zero-discharge status, Finipur no longer discharges industrial wastewater. All our process water is 100% reused in existing production processes or is disposed of by specialized companies.

3. Biobased materialen

We support the growing demand for natural and renewable materials. By coating, impregnation and laminating flax, hemp, jute, wool and cotton using environmentally friendly techniques, we strengthen bio-based substrates without losing their natural properties.

4. Renewable energy

Since 2021, more than 2,300 PV panels have been installed on our roofs. This achieves an annual saving of 222.76 tonnes of CO², which corresponds to an offset of approximately 20.9 hectares of forest, or about 8,360 trees. In 2026, we also invested in a large industrial battery, so that we can use even more of our own green energy.

5. Energy efficiency and environmental policy

We continuously invest in energy-efficient processes, high-quality machines and a safe working environment. Our active environmental policy ensures that we comply with all legal requirements.

6. Cooperation and transparency

Sustainability cannot be achieved alone. We work with our customers, suppliers and partners to create solutions that are economically, environmentally and socially responsible. We communicate openly about our ambitions and our progress.

Our promise

Finipur is committed to:

- develop products that are compatible with circular production chains;
- use raw materials, energy and human effort in the most efficient way;
- to work exclusively with raw materials that comply with the legislation in force;
- provide a safe and respectful working environment for our employees;
- evaluate and improve our environmental, social and economic performance on an annual basis.
